#### **ABOUT SHERIDAN**

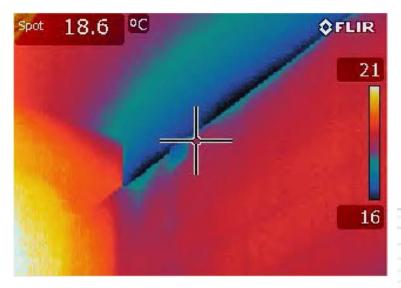

Hazel McCallion Campus Mississauga, Ontario

#### **INSTITUTIONAL PAIN POINTS**

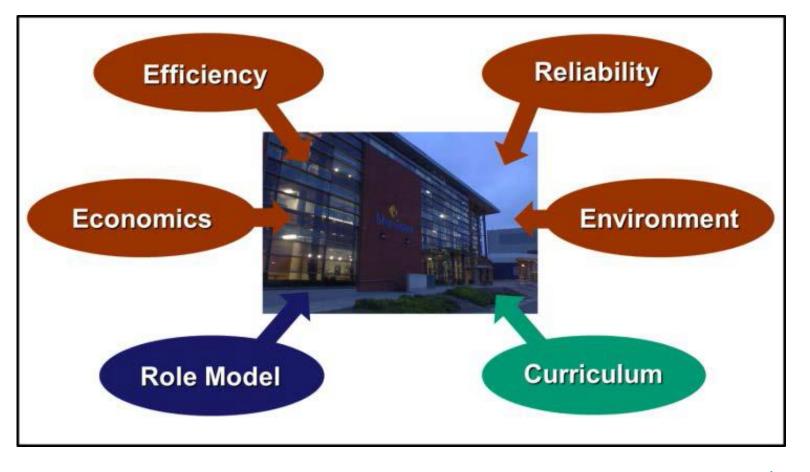

#### **BROADER GOALS**

Sheridan Get Creative

Standard Energy Plan	Breakthrough Energy Plan							
Built on Expected	Drives Exceptional							
Performance	Performance							
Uses a Forecasting Approach	Uses a Backcasting Approach							
Builds Technical Case, Then	Builds Both Cases							
Financial	Simultaneously							
Predetermines an Approach	Suggests Approaches, Then							
	Tests							
Uses Simple Financial Models	Uses Integrated Financial							
	Models							
Energy Savings < 20%	Energy Savings > 50%							
	Inspires Organization							
	Establishes Leadership							
	Position							

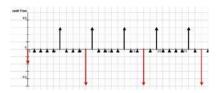

#### MAINTAIN PLANNING OWNERSHIP

- Supports Organizational Learning and Growth
- Leverages Competencies Within Organization
- Leverages Competencies Around Organization
- Aligns Team Around Implementation

#### **SET FRAMING GOALS**

#### 7% Internal Rate of Return

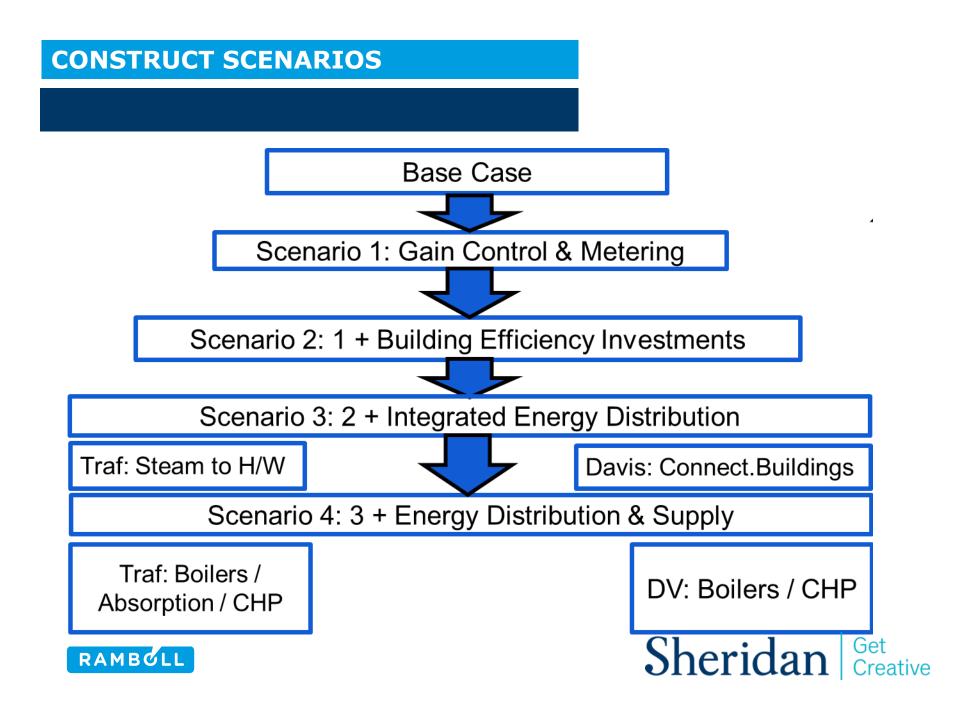

40% Reduction in Carbon Emissions

50% Reduction in Source Energy Consumption

#### SHERIDAN'S RESULTS

	Condition			Energy (MWh/year)	Emissions	Savings (%)					
#	Scenario	Gas	Electricity Electricty Purchase conversion		Total Total on site Source*)		CO <sub>2</sub> (mt)	Ene on site	ergy Source	CO <sub>2</sub>	
	Including PV Constant CO2-Index Elec	tricity									
	Baseline 2010	19,900	28,300 57,500		48,200 105,700		9,660 0%		0%	0%	
				2035 Re	sults						
0	Scenario 0: Base Case	23,300	23,300 31,100 63,		54,400	117,500	10,900	-	-	-	
1	Scenario 1: Gain Control 16,100 19,200 39,000		35,300	74,300	7,080	35%	37%	35%			
2	Scenario 2: Gain Control and Building Efficiency	12,100	13,000	26,400	25,100	51,500	5,030	54%	56%	54%	
3	Scenario 3: Integrated Energy Distribution 12,100 13		13,000	26,400	25,100	51,500	5,030	54%	56%	54%	
4	Scenario 4: Integrated Energy Supply			29,000	38,300	5,820	47%	67%	47%		

\*) Source energy: Energy used on site plus energy losses in electricity generation and distribution

### REGULATIONS AND STANDARDS IMPACT QUALITY

		14 14	
ASME B36.10	Welded and Seamless Wrought Pipe	EN 10216 EN 10217	Seamless Steel Pipe Welded Steel Pipe
ASTEM A53 ASTEM A106	Steel Pipe Seamless Steel Pipe		
ASTM F2165	Pre-Insulated Bonded Piping	EN 253 EN 448 EN 488 EN 489	District Heating Pipes District Heating Fittings District Heating Valves District Heating Joints
ASME B31.1	Power Piping	EN 13941	Design and Installation of District Heating Pipes
		EN 14419	Surveillance Systems

#### PIPING INSTALLATION BEST OF BOTH CONTINENTS ASME VS. EN STANDARDS

Temp = < 100°C (212°F) Pres. = < 10 bar (145 PSI)

<u>Regulation</u>: ASME B31.1 – Power Piping

<u>Standard</u>: EN 13941 – Design and installation of preinsulated bonded pipe systems for district heating

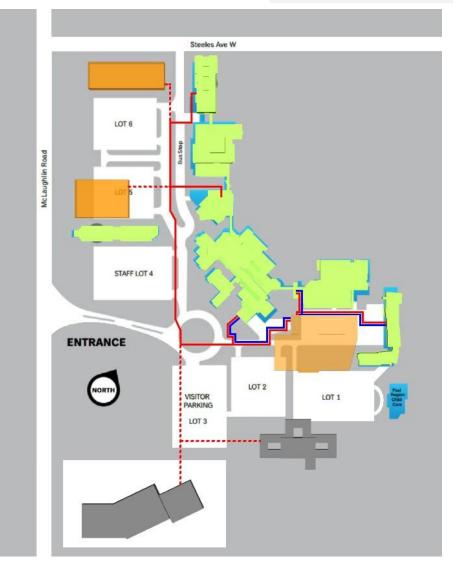

- X-Ray not required
- Alignment to be within 2mm
- Hydrostatic pressure test to be 1.5 times the design pressure, held for 10 minutes, then reduced to design for leak test
- Alignment to be within 1mm
- Pressure test is not required, but weld leak tightness test of all welds is

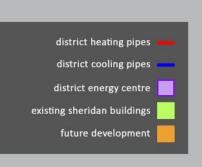

X-Ray required on 10% of welds

- 2. European Design Advantages & highlights
- 3. Procurement Right sourcing
- 4. Construction Lessons learned
- 5. Next steps Connecting buildings
- 6. Questions?

### **OWNER – LESSONS LEARNED**

- Certified welding procedures as part of tender requirements
- Thoroughly investigate existing site conditions
- Single-person responsibility for material
  - Confirm proper use
  - Carefully track stock
- Know your contract rights, and theirs
- Site coordination is important

### **CONSULTANT – SITE INSPECTION**
