SCIENCE CENTER DEVELOPMENT
SCIENCE CENTER DEVELOPMENT

- 7 Steam Absorption Chillers
- 3 Electric Centrifugal Chillers
NEED RELIABILITY AND REDUNDANCY

- Modern Science Center
  - Research intensive, multi-story classroom and laboratory
  - Modern architecture – fewer adaptations to hot climate
  - Single point of failure in Unitary HVAC systems - Downtime

- 1975 – John Casey proposed Central Chilled Water

- Alternative was Distributed Chilled Water System
  - Load Diversity
  - Allowed for non-critical outages

DEVELOPMENT OF DISTRICT LOOPS

- 20 years with no redundancy at the Science Center
  » O&M working nights to keep chillers online in daytime
- 1980 – Study commissioned to investigate solution
- 1981 Design and Construction began on Science Center Chilled Water Loop (3-pipe system)
DISTRIBUTED LOOPS 1981 - 2002

- 1981 Science Center
- 1985 North Campus
- 1986 Vet school Loop
- 1989 South Loop
- 1998 East Campus Loop
- 2001 Central Loop
- 2002 Riverbend Campus
DRIVERS TO CENTRALIZE

-The problems with distributed chiller plants:
  » Multiple smaller chillers - maintenance
  » Multiple mechanical rooms that could be program space
  » Multiple cooling towers across campus – noise and biological concerns
  » Complex controls required for staging
  » Hydraulic challenges
  » Chiller loading inefficiencies
PLANNING & DEVELOPMENT

❖ Master Planning CHW Growth and Development
  » Tied to architectural master plan
  » Review of hydraulics and system age
  » Campus wide approach of loading and capacity review

❖ Develop Regional Plants
  » Larger, interconnected distribution systems
  » Relocation of capacity from buildings to plants
TAKING STOCK

FIGURE NO. 3-2: SUMMARY OF ChILLER AGES

UNIVERSITY OF GEORGIA
TIPPING POINT – SOUTH LOOP

- Pharmacy South in Design
  - No Tower Space
- South Anchor Plant
  - Designed for cogeneration; absorption chillers inactive
  - Connected to South Loop
- (2) 1,000 Ton Centrifugal Chillers
- First Central Chilled Water Plant - 2008
THE PLAN FOR CENTRAL PLANTS
DEP2 – SOUTH / SCIENCE LOOP

- (2) 1,000 Ton Original Building
- (3) 1,000 Ton in New Annex
  - (3) 1,000 Tons Future Capacity
- 8,000 Tons CHW Capacity
- Plans for future consolidation and retirement of building chillers
TIPPING POINT – CENTRAL LOOP

- Tate Center Expansion
  - Planning Study Performed
  - Plant Identified
  - Tower Location?

- Development of NW Precinct
  - Special Collections Library
  - Terry College of Business

- District Plant 1 Identified
DEP1 – CENTRAL LOOP

- Steam to Heating Water
  - Low Temperature Hot Water Distribution
- 10,000 Tons CHW Capacity
- Accommodate Housing & Dining Upgrades
  - Brumby, Russell, Creswell
  - Bolton Dining Commons
THE PLAN FOR CENTRAL PLANTS
WHERE DO WE GO FROM HERE?
TAKEAWAYS

- Master Planning / coordination with architectural – Look for Utility corridors, Potential District Energy Plant Sites
- Don’t forget Electrical Planning
- Use Large buildings as opportunities to create districts
- Explore Revenue Sources – CHW sales, Ga. Power Energy Rebate Programs, ESCOs
- Took 33 years for UGA to get from Unitary to Central – have a plan and start where you can
