Mid-American Group Excavation and 10" pipe insertion

In 2010 a section of pipe illustrated in **RED** was abandoned due to operation issues and was not required to serve any customers.

In 2015, a new rail system was put in place cutting a back-up feed for a critical Hospital Customer. This is shown in the Black Rectangle

Pressure: 235p.s.i. nominal
Diameter: 26"
450F Operating Temp

Pressure: 120 p.s.i. nominal
Diameter: 10" up Warren tying into 16"
on Brush
350F Operating Temp

Pressure: 120 p.s.i. nominal
Diameter: 16"

Pressure: 235 p.s.i. nominal
Diameter: 20" reducing to 10" at
manhole #5

Mid-American Group

Excavation and 10" pipe insertion

Task:

- Maintain a back up feed for a critical Hospital customer requiring steam 24-7 for heat, air-conditioning, and medical sterilization.
 - The Back-up was fed by the Green line shown previously, but was scheduled to be cut due to the installation of a new rail system and be down for an extended period of time.
- A previously abandoned section of pipe shown in Red on the previous slide from Plant 1 was chosen to take the place of the back-up due to economical and logistics reasons.
 - Refurbish Ø 16" Steam Pipe that connects the 26"- 235p.s.i. from the Plant 1 steam line to the critical Hospital Customer 120# feeder.
- Option 1: Open cut entire length of 450', excavate down to pipe, install shoring, remove concrete, cut pipe out in sections and remove, install new pipe Ø 20" , pour concrete around pipe, backfill, pour concrete.
- Option 2: Open cut 2 sections 20'x10', excavate down to pipe, install shoring, remove 1 section of pipe in each location, lower Ø10" pre-insulated pipe into excavation, weld pipe and pull into adjacent manhole.
 - Existing Ø 20" pipe was actually oversized for the requirements to customers on that loop. A Ø10" Steam pipe would suffice without any negative impacts.
- Option 2 was chosen as a cost and time reduction option
 - A solution was then required for space concerns in the 20" pipe ID envelop

Insulation Comparison with a 7.2 R Value

Pyrogel Insulation was chosen due to its reduced thickness for equivalent R value

Mid-American Group Excavation and 10" pipe insertion

Pyrogel Insulation Selection Table

Fluid Operating Temperature Range (°F) and Usage	Insulation Conductivity	
	Conductivity Btu.in/(h.ft ² .°F)	Mean Rating Temperature, °F
>350°F	0.32 – 0.34	250
251°F to 350°F	0.29 – 0.32	200
201°F to 250°F	0.27 – 0.30	150
141°F to 200°F	0.25 – 0.29	125
105°F to 140°F	0.22 – 0.28	100

Pyrogel XTE				
<1	1 to <1½	1½ to <4	4 to <8	≥8
1.2	1.2	1.6	2.0	2.0
1.0	1.2	1.6	2.0	2.0
0.8	0.8	1.2	1.6	1.6
0.6	0.6	1.0	1.2	1.2
0.4	0.4	0.8	0.8	0.8

For an Operating temperature of 450 °F,
2" of Pyrogel is required for a 10" pipe

Mid-American Group Excavation and 10" pipe insertion

Foamglas Insulation 7.2 R Value

Leaving a 1.00" clearance
to pull in new pipe

Pyrogel Insulation 7.2 R Value

Leaving a 6.50" clearance
to pull in new pipe

Excavation and 10” pipe insertion

Conclusion:

- Project allows an old connection to be re-established so that one of the critical hospital customers is provided with a back-up feed of critical Steam. The new lite rail system being built in Detroit has a section of about 600 feet of tracks running directly over the steam line. It was a concern that if major work had to be done on the steam line under this section of tracks, a disruption to the rail would be imminent. By re-establishing this section there would be no disruption to the rail while still providing redundancy to the hospitals and north end of the steam system.
- Project was completed with about a 40% Cost Savings compared to Excavating all 450' of open excavation / installing shoring / removing old pipe / new pipe installation / backfilling / concrete and asphalt installation.
 - The Cost savings would have been even more if Asbestos abatement had been required.
- All Anchors / valves / expansion joints / drip legs required could be installed in the 3 existing manholes.
- Project was completed with a 50% reduction in overall project time
 - City was satisfied with a shorter road closure duration and disruption of traffic flow
- Safety was improved with less confined space time for the crew
